ALESSO

Interactive Narrative Explorer

Age: 24
Work: DHDK Student
Location: Bologna, Italy

- Goals:**
- Explore Marsili via interactive storytelling
 - Experience immersive, participatory museums
 - Engage with Twine-style branching narratives
 - Interact with objects and digital layers
- Frustrations:**
- Static, text-heavy exhibitions
 - Long academic panels reduce engagement
 - Non-interactive historical displays
 - Poorly integrated digital systems

"I enjoy museums and historical stories, but many exhibitions feel too static. I prefer experiences where I can explore, interact, and discover the narrative myself."

Biography

Alessio is a university student with a strong interest in humanities, science history, interactive storytelling, and digital media experiences. He enjoys museums that combine narrative, exploration, and technology in meaningful ways rather than relying on traditional information panels. Familiar with Twine-based storytelling and branching narratives, he regularly explores interactive fiction and narrative-driven experiences that allow users to shape their own journey through choice and discovery.

Although he frequently visits museums, Alessio often loses engagement when exhibitions feel overly text-heavy or observational. He prefers immersive experiences that connect physical heritage with digital interaction and allow visitors to actively participate in exploration, interpretation, and narrative progression.

Needs from the Experience

- Twine-style narrative exploration and branching interaction
- Interactive storytelling connected to real museum objects
- Freedom to explore content at different depths
- Visually engaging and intuitive interaction systems
- Meaningful connections between digital and physical heritage

Technology Familiarity

- Regularly uses Twine, interactive fiction platforms
- Comfortable with QR-based interaction and narrative systems
- Frequently explores branching and participatory digital media
- Interested in hybrid storytelling and heritage interaction design

SARA

Inclusive Experience Explorer

Age: 24

Work: Accessibility and Cultural Studies Student

Location: Florence, Italy

Goals:

- Explore museum content independently
- Experience accessible interactive storytelling
- Understand Marsili through audio guidance
- Participate equally in physical & digital experience

Frustrations:

- Exhibitions rely too heavily on visual observation
- Small text and unclear layouts hinder navigation
- Interactive systems often lack audio guidance
- Accessibility treated as secondary, not essential

"I enjoy museums when the experience is designed so everyone can participate equally, not only those who rely on visual interaction."

Biography

Sara is a university student interested in cultural heritage, accessibility, and inclusive interaction design. As a visually impaired visitor, she often finds traditional museum experiences difficult to navigate because they depend heavily on visual observation, text panels, or unclear spatial guidance. She appreciates experiences that combine audio narration, tactile interaction, subtitles, and clear navigation systems to create a more inclusive environment.

Sara values museum experiences that are designed thoughtfully for users with different accessibility needs, rather than treating accessibility as an additional feature added later in the process. She enjoys interactive storytelling where sound, narration, and guided interaction build immersion and understanding.

Needs from the Experience

- Clear audio narration and guided storytelling
- Subtitle-supported and multi-modal interaction
- Accessible navigation and understandable flow
- Consistent audio and tactile feedback
- Inclusive design supporting independent participation
- Visual and audio interaction working together naturally

Technology Familiarity

- Uses accessibility-supported mobile applications
- Comfortable with voice-based and screen-reader navigation
- Interested in accessible digital storytelling
- Uses smartphones and assistive technologies
